

Animal Disposition

- 1) Euthanasia methods are described in this section of the protocol.
 - a. Even if animals studied in the field will only be observed or will be released, you must include an appropriate method of euthanasia that could be used in the event of an emergency.
- 2) Please refer to the ACUC [Euthanasia Guidelines](http://acuc.berkeley.edu/guidelines/euthanasia.pdf) found on the ACUC web site, <http://acuc.berkeley.edu/guidelines/euthanasia.pdf>.

NOTE: Following euthanasia and prior to carcass disposal, an additional physical means of euthanasia must be performed.

- 3) To add a method of euthanasia, click on the **Add** button.

 Animal Disposition

Please consult the [ACUC Euthanasia Guidelines](#). Following euthanasia and prior to carcass disposal, an additional physical means of ensuring euthanasia must be performed.

Euthanasia Add | Delete
 Please click on 'Add' to add method(s) of Euthanasia
 Provide specific details for carcass disposal.

Click **Add** to describe euthanasia methods for each species.

- 4) On the **Euthanasia** pop-up window, select the **Species** from the drop-down menu, which includes all species added in the Species section of the protocol.

Note: * denotes mandatory field.

Euthanasia		Save Cancel
Species *	Mouse, Laboratory (OLAC Vivarium)	
Method of Euthanasia: Primary *	Carbon Dioxide	
Route of Administration *	Inhalation (IN)	
Dosage (in mg/kg if possible) and volume	dosage	
Method of Euthanasia: Secondary	Cervical Dislocation	
Briefly describe the euthanasia procedure	Mice from one cage will be placed in the CO2 euthanasia chamber equipped with a lid. CO2 is delivered via a compressed gas cylinder equipped with a flow regulator at a displacement rate of 10-30%. After a minimum of 6 minutes exposure, animals will be removed and a cervical dislocation will be performed to verify death.	

Complete:

- Species
- Primary Method
- Route
- Dosage & Volume
- Secondary Method
- Brief Description

Click **Save** to add the euthanasia method to the Animal Disposition section.

- a. A euthanasia method must be added for each species listed on the protocol. If you are using more than one species, you must add separate euthanasia methods for each species.
 - b. If you are euthanizing one species using multiple different methods, you must add separate euthanasia methods, selecting the same species.
- 5) Select the **Primary Method of Euthanasia** from the drop-down list, or select **Other** and describe the method of euthanasia.
- a. If you have selected a physical method of euthanasia as the Primary Method (e.g., cervical dislocation or decapitation), you will be asked to provide anesthesia information, or for scientific justification if no anesthesia is provided.

Note: * denotes mandatory field.

Euthanasia		Save Cancel
Species *	Mouse, Laboratory (OLAC Vivarium)	
Method of Euthanasia: Primary *	Decapitation	
Will the animal be anesthetized or sedated?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
Agent Name *	Is oflurane	
Route of Administration *	Inhalation (IN)	
Dosage (in mg/kg if possible) and volume	dosage	
Method of Euthanasia: Secondary	None	
Briefly describe the euthanasia procedure	<input type="text"/>	

For physical methods of primary euthanasia, describe anesthesia provided.

Note: * denotes mandatory field.

Euthanasia		Save Cancel
Species *	Mouse, Laboratory (OLAC Vivarium)	
Method of Euthanasia: Primary *	Decapitation	
Will the animal be anesthetized or sedated?	Yes <input checked="" type="checkbox"/> No	
Dosage (in mg/kg if possible) and volume	<input type="text"/>	
Justify this method and how the welfare of the animal will be protected *	<input type="text"/>	
Method of Euthanasia: Secondary	None	
Briefly describe the euthanasia procedure	<input type="text"/>	

If animals will not be sedated, a scientific justification must be provided.

- 6) Select the **Route of Administration** for the Primary Method of Euthanasia from the drop-down list, or select **Other** and describe.
- 7) Provide the **Dosage**, in mg/kg if possible, and **Volume**.
- 8) Select the **Secondary Method of Euthanasia** from the drop-down list.
 - a. If have chosen a physical method of euthanasia as the Primary Method (e.g., cervical dislocation or decapitation), you do not need to provide a Secondary Method of Euthanasia; select **None**.
- 9) Provide a brief description for each method of euthanasia. This should include the sequence and timing of events, and any special equipment settings or maintenance.

- 10) Once you complete the Euthanasia pop-up window, click on **Save**, and a summary will be added to the Animal Disposition page.
- 11) To edit a euthanasia method listed, click on the **Species link** for that method. This will open the Euthanasia pop-up window.
- 12) To delete a euthanasia method listed, click on the box next to that method and select **Delete**.

Click **Next** to save and go to the next Procedure Details tab.

Click **Species Link** to edit.

To delete, select the box next to the method and **Delete**.

Euthanasia				Add	Delete
Species	Primary euthanasia method	Route of Administration	Dosage mg/kg (if possible)	Secondary euthanasia method	
<input type="checkbox"/> Mouse (OLAC Vivarium)	Carbon Dioxide	Inhalation (IN)	dosage	Cervical Dislocation	
<input type="checkbox"/> Mouse (OLAC Vivarium)	Decapitation	Intramuscularly (IM)	dosage	None	

- 13) Provide specific details for carcass disposal.
- 14) Once you complete the section, click on **Next** to go to the next Procedure Details Tab.
